BOOK SYNOPSIS

Frameworks for Radiology Reporting introduces a system for reporting on any commonly encountered radiological image so that the reader learns the key points they should be looking for, and the main pitfalls they may encounter as they interpret the image and make a diagnosis. Opening with a chapter on the fundamentals of radiology reporting, the remainder of the book is divided up by body system, each of which covers the commonly encountered radiological examinations, starting with the basics and moving on to more complex ones. There is also a chapter on paediatrics, highlighting the main differences between paediatric and adult radiology, and the major pitfalls to look out for. Throughout, high quality radiological images are annotated to help the reader see what they need to be looking out for. Written by two highly motivated radiology trainees with a special interest in medical education, this book benefits from the additional expertise of a range of consultant radiologists from a variety of sub-specialties. Frameworks for Radiology Reporting will not only be of great value to trainee radiologists, but also to any physician or radiographer who has to undertake radiological reporting and be effective at it.
